Look to CDC for comprehensive guidelines for

Look to Syva for solutions. New guidelines from the Centers for Disease Control and Prevention (CDC) on testing for *Chlamydia trachomatis* address the special requirements of different populations and sampling sites. From culture to non-culture methods, for screening or verification, Syva has a full range of solutions to meet the guidelines. But that’s only the beginning.

Convenient for patients, physicians and lab. For greater efficiency, Syva’s streamlined sampling system utilizes a single swab for detection and verification in most cases. To support your public awareness efforts, a selection of physician and patient education materials is available. Our training and support programs for laboratory personnel are second to none. After all, Syva set the standard in chlamydia testing with our fluorescein-labeled monoclonal antibodies in our MicroTrak® Direct Specimen and Culture Confirmation Tests.
Choice of assays. Depending on your laboratory's needs, you can run the MicroTrak II Chlamydia EIA on the MicroTrak XL or the MicroTrak EIA system. For convenient verification, use Chlamydia Blocking Reagent. For rapid turnaround with a microscopic method, depend on the proven performance of the MicroTrak Chlamydia trachomatis Direct Specimen Test. Finally, when medicolegal verification is required, you have the proven track record of the MicroTrak Culture Confirmation Test.

We’ll help you get started. For help in designing a chlamydia program to meet your laboratory’s specific testing needs, give Syva a call. 1-800-227-9948. For a copy of Recommendations for the Prevention and Management of Chlamydia trachomatis Infections, 1993, circle the reader service card.
Four ways better.

Four-in-One Inoculoo™ Disposable Calibrated Inoculating Loop.
With its unique 4-sided streaker tip, InocuLoop™ is the fastest, most efficient and most economical loop available. Since you use a new side for each streak, you can inoculate a petri dish with just one InocuLoop™.
Ideal for all bacterial inoculation and quantitative procedures—sampling, serial dilutions, and urine counts, InocuLoop™ also eliminates the time spent on sterilization, and, unlike metal loops, can be used in the field, under hoods, in anaerobic chambers, and satellite lab testing...anywhere. Plus, the four surfaces end in an apex and can be used as a built-in picker for isolating colonies.
Choose 1µl or 10µl calibrated loop or a needle. Each case of InocuLoops™ includes a free Calopiprator™ sizing gauge.
U.S. Patent Nos. 4,092,831 5,151,558

FPC® Fecal Parasite Concentrator. Shown to be Best.
A recent independent study® comparing various fecal concentrating devices concluded that our patented FPC® two-tube closed system is easier to use, provides better microscopic examination, has the shortest processing time and yet costs less than all the others.
FPC® easy-to-follow procedure is leak-proof, self-contained, leaves no mess, minimizes odor, protects personnel against contamination, and works superbly for both fresh and preserved specimens.
Originally developed at the National Institutes of Health, FPC® is manufactured by Evergreen under exclusive licensing agreement with the U.S. Government.
U.S. Patent No. 4,081,396, *Perry JL, Matthews JS, Miller GR (June 1990)

Here are all the same features of the FPC® superior ease of use, superior microscopic examination, and the shortest processing time – for the lowest price.
The larger size is particularly advantageous when only a relatively small number of organisms are present in the sample.
Like the original, JUMBO is one of the cleanest, most modern means of isolating helminth eggs and larval and protozoan cysts. Both are also effective in the recovery of Cryptosporidium parvum and Isospora belli.
More than just leaving labs tidier and less odorous, FPC® and JUMBO has shown to be the answer to the pressing need in the parasitology field for standardization, and in minimizing lab personnel's exposure to potentially infectious specimens.
U.S. Patent No. 4,081,396

Safer, User-Friendly Sputocol™ Sputum Collection System.
Our patented Sputocol™ collection system with its easy-to-follow directions and practical features is said to be the most innovative and user-friendly available today.
Plus, its smart design makes Sputocol™ the safest system, as well. A base-stand protects the 50 mL centrifuge tube from contamination and shields lab personnel from contact while providing a visual check on the specimen.
And a handy capping device seals the tube without having to remove it from the base.
Sputocol™ For safe, simple, cost-efficient sputum collection.
U.S. Patent No. 4,741,346

Antimicrobial and chemotherapeutic drugs have saved more lives than any other clinical development in history and have done so in an astonishingly short time. In less than 50 years, these agents have effectively combatted most bacterial and many fungal, viral, and parasitic infections. However, scientists have discovered that microorganisms as well as cancer cells possess potent abilities to defend themselves and render new drugs ineffective. Therefore, there is a constant need for new compounds to combat drug resistance; this was the overarching theme of both the 18th ICC conference and this proceedings volume. Basic and clinical research in microbial pathogenesis, infectious diseases, hematology, oncology, and drug development and design is presented in more than 850 extended abstracts submitted at the conference in Stockholm, Sweden (1993).

BACTERIAL PATHOGENESIS
A MOLECULAR APPROACH
Abigail A. Salyers, Ph.D., and Dixie D. Whitt, Ph.D.

"This wonderful book by Abigail Salyers and Dixie Whitt
fills the need for a textbook designed to introduce students
at all levels into the field of bacterial pathogenesis. The
authors have done a splendid job of capturing the rich
excitement that pervades the field, they have portrayed the
intradisciplinary nature of the field, and they have weaved
enough cell biology and cellular immunology into their text
to do justice to the breadth of this experimental specialty."
—Stanley Falkow, Stanford University
(from the Foreword)

CD-ROM DEMONSTRATION DISKS FOR BOTH
MAC AND DOS ARE NOW AVAILABLE!

The most exciting features of our
newest product, ASM Journals on CD-
ROM, are demonstrated in an updated
floppy disk that is FREE for the asking!

The only requirements are that you have
a Macintosh or a PC/DOS-compatible
computer plus a VGA color monitor and
that you fax (202 942-9355) or mail a
request for the floppy to: L. M. Illig, Jour-
nals Division, American Society for Mi-
crobiology, 1325 Massachusetts Ave.,
N.W., Washington, DC 20005-4171. For
appropriate pricing information and ac-
companying literature, indicate "ASM
member" or "nonmember" on your re-
quest. Also, specify "Mac" or "DOS."

Nobel Prize winning technology is now applied to medicine!

THE POLYMERASE CHAIN REACTION IN CLINICAL AND LABORATORY MEDICINE

Produced by American Medical Television (AMT) and the American Society for Microbiology (ASM)

This kit provides straightforward and detailed information on PCR that can be used by laboratory directors as they set up a diagnostic PCR service. The videos show scientists and clinicians demonstrating how and why they use PCR in their laboratories. The book provides over 60 detailed protocols offering proven applications of molecular diagnostic techniques for immediate use in clinical laboratories. This entire kit is an excellent way to introduce this new technology to clinical laboratory directors, infectious disease physicians, and laboratory professionals.

Each kit contains:

- A physician educational video, PCR in Clinical Medicine, which focuses on the benefits of PCR in patient care using case studies.
- A laboratory educational video, PCR in Laboratory Medicine: Protocols and Issues, which "walks" the viewer through a step-by-step guide on setting up PCR in a clinical microbiology laboratory and addresses such issues as facilities, equipment, techniques, sample preparation, contamination, amplification, and detection.
- One copy of ASM’s book, Diagnostic Molecular Microbiology, which covers the principles behind the technology and provides over 60 protocols using PCR — essentially a compendium of “molecular recipes”.
- An introductory slide set on PCR (10 slides).
- Self-assessment materials and CME evaluation questions for AMA Category 1 CME credits.

AMERICAN SOCIETY FOR MICROBIOLOGY
An exciting interactive computer tutorial for medical microbiology students

MICRO: COMPUTERIZED CASES IN MEDICAL MICROBIOLOGY AND INFECTIOUS DISEASES

Software Developers: Robert Twarog Ph.D., Helen Cronenberger Ph.D., Peter Gilligan Ph.D., M. Lynn Smiley M.D., and Daniel S. Shapiro M.D.

This exciting new program of 28 interactive computerized cases features actual patient histories and presentations in the fields of bacteriology, mycology, and parasitology. These patients' cases were seen at a major university teaching hospital and represent either typical or life-threatening infections. Extensive details of clinical tests are provided including superb color illustrations of laboratory specimens, tests, X-rays, cultures, etc. Multiple choice questions follow each case history, testing the student's knowledge in organism characteristics and laboratory diagnosis, pathogenesis and clinical characteristics, and epidemiology. All answers, right and wrong, are carefully explained. This program easily synthesizes real patient cases into your medical microbiology courses in an engaging and accessible manner. It's perfect as a self-study aid for your students whether they're in a traditional classroom setting or preparing for the medical boards.

"The use of the software is superior to any of the other programs that I have worked with to date."
— Steven Specter, Ph.D., University of South Florida College of Medicine

"The strengths of the software are numerous: interactive, visually helpful, clearly presented, user friendly.....Medical students will love the software because it is integrative and case-study oriented."
— Alison D. O'Brien, Ph.D., Uniformed Services University of the Health Sciences

Hardware/Software Requirements: IBM PC or compatible with a 386 microprocessor running MS-DOS 5.0 or higher, OS/2 2.0, or Windows 3.1; VGA color monitor; 4 Mb RAM; 31 Mb free space on hard drive. Package includes 9 3/4" HD disks and instruction booklet. A free demonstration disk is available for professors teaching appropriate courses. Please request a copy on your university stationery, indicating the course title, and mail it to ASM Press, 1325 Massachusetts Ave. N.W., Washington, DC 20005.

(MIC1) 1-site license: $400. (MIC5) 5-site license: $600. (MIC10) 10-site license: $800. (MICM)
Mainframe: $1000. Prices are discounted 50% upon proof of current bookstore order for 40 or more copies of ASM's textbook, Cases in Medical Microbiology and Infectious Diseases, e.g. a 5-site license would be $300.

ASM accepts VISA, MasterCard, American Express, EuroCard, purchase orders, and checks drawn on U.S. banks in U.S. dollars. Canadian orders must include 7% G.S.T. ASM Press, P.O. Box 605, Herndon, VA 22070 USA. Fax: (703) 689-0660.

Circle Number #110 on Reader Service Card
his stimulating bimonthly publication brings together in a single journal authoritative peer-reviewed reports on the latest developments in human immune response assessment, including indications for testing, methods, and interpretation of results.

Areas covered include: humoral and cellular immunity, including specific immune cell functions (B cells, T cells, and their subsets); mediators and cytokines, complement components, and other serum proteins; natural killer cells, monocytes/macrophages, neutrophils, and myeloid cells; immune responses to infection caused by bacteria, viruses, fungi, and parasites; AIDS and other retroviral diseases; primary and secondary immunodeficiency disorders; evaluation of hypersensitivity and autoimmune diseases; histocompatibility and transplantation immunology; lymphoreticular malignancies and cancer immunology; immunogenetic testing applied to human disease diagnosis and evaluation; immunologic monitoring, including flow cytometry and vaccine therapy; laboratory immunology as related to allergy, dermatology, immunohematology, rheumatology, neurology, oral medicine, and other medical and surgical subspecialties; purification of products for use as probes in the immune response.

Novel animal models relevant to the diagnosis of human disease, animal studies on how to assess the immune response, new or evolving technology in diagnostic methods, establishment of normal immune responses and/or values, case reports, quality control, and biostatistics are also suitable topics for the journal. Minireviews, guest commentaries, and letters to the editor will be included.

- “Flow Cytometric Immunodetection of Human Immunodeficiency Virus Type 1 Proviral DNA by Heminested PCR and Digoxigenin-Labeled Probes” by G. Yang, S. Garhwal, J. C. Olson, and G. N. Vyas
- “Decline in Delayed-Type Hypersensitivity Response in Obese Women Following Weight Reduction” by D. D. Stallone, A. J. Stunkard, B. Zweiman, T. A. Wadden, and G. D. Foster
- “Spontaneous Lymphocyte Proliferation in Human T-Cell Lymphotropic Virus Type I (HTLV-I) and HTLV-II Infection: T-Cell Subset Responses and Their Relationships to the Presence of Provirus and Viral Antigen Production” by H. F. Prince, J. York, J. Golding, S. M. Owen, and R. B. Lal
- “Enriched HLA-DQ3 Phenotype and Decreased Class I Major Histocompatibility Complex Antigen Expression in Recurrent Respiratory Papillomatosis” by V. R. Bonagura, F. P. Siegal, A. E. Abramson, E. Santiago-Schwarz, M. F. O'Reilly, K. Shah, D. Drake, and B. M. Steinberg

BBL® Crystal™ A Breakthrough In Microbial ID.

Enter the new age with BBL® Crystal™. The first microbial ID system that links automatic inoculation and one-step convenience with unmatched safety and accuracy.

Crystal is so easy to use. You simply pour your inoculum suspension directly into the Crystal device, rock the base and snap on the lid. Automatically, you’ve created a comprehensive, accurate and closed microbial system.

Proteus mirabilis as identified by BBL® Crystal™ Enteric/Nonfermenter ID.

Crystal reduces costs, too. No pipettes...no reagent additions...much faster to prepare and use. Plus, Crystal significantly reduces your QC time and materials, saves incubation time and greatly simplifies your lab workflow. Crystal even gives you the convenience and efficiency of a computerized codebook.

For exceptional ease of use, safety, and time and money savings, use BBL® Crystal™ for Rapid Stool/Enteric and Enteric/Nonfermenter ID. Available now from your Becton Dickinson Microbiology Systems distributor.
